Java

```java
lass Solution {
    public int[] smallerNumbersThanCurrent(int[] nums) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} nums
 * @return {number[]}
 */
var smallerNumbersThanCurrent = function(nums) {

};
```

TypeScript

```typescript
function smallerNumbersThanCurrent(nums: number[]): number[] {

};
```

C++

```cpp
class Solution {
public:
```

```
    vector<int> smallerNumbersThanCurrent(vector<int>& nums) {

    }
};
```

C#

```
public class Solution {
    public int[] SmallerNumbersThanCurrent(int[] nums) {

    }
}
```

Kotlin

```
class Solution {
    fun smallerNumbersThanCurrent(nums: IntArray): IntArray {

    }
}
```
